

Visual Search

Searching Images, Videos, Faces, Products and Logos

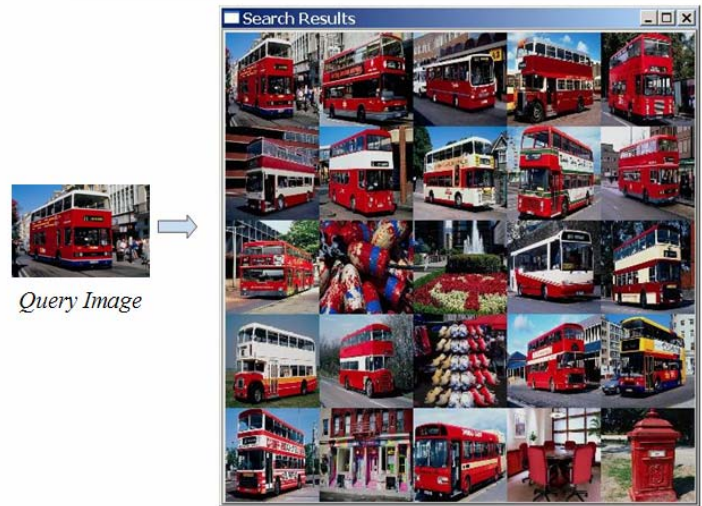

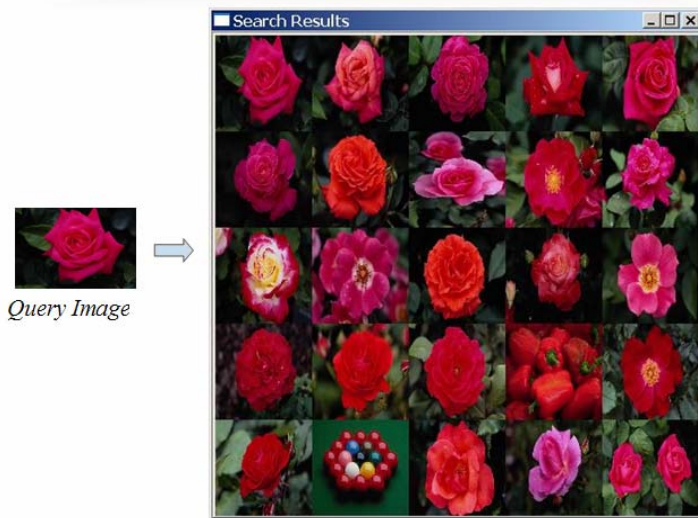

Image Search

iSearch is an intelligent image search solution that can search millions of images in seconds based purely on the visual content of the image. iSearch uses sophisticated algorithms to analyze the image color, shape, texture, and characteristics to compare and search for similar images from a large image data set. It eliminates the need for extensive data tagging of images to make them searchable.

iSearch provides the following features:

- Search for "exact" image match (or)
- Search for "Similar" images
- Search for matches for entire image or sections of an image.

iSearch is available on the following platforms:

- Desktop Version
- Intranet over LAN
- Internet
- Mobile platforms

Video Search

vSearch is a comprehensive video search solution based on automatic analysis of the visual content of the video. It uses sophisticated algorithms to analyze video motion, objects, color, scenes, background and foreground, texture and other characteristics to search for and locate exact or similar videos or find the location of the video segment of interest in a large video archive. It eliminates the need for the tedious and time consuming task of extensive text-tagging of videos to make them searchable.

vSearch provides the following features:

- Search for "exact" video match (or)
- Search for "Similar" videos
- Search for matches for entire video or partial scenes in a video clip.

vSearch is available on the following platforms:

- Desktop Version
- Intranet over LAN
- Internet
- Mobile platforms

Visual Content Search for Images, Videos and Faces

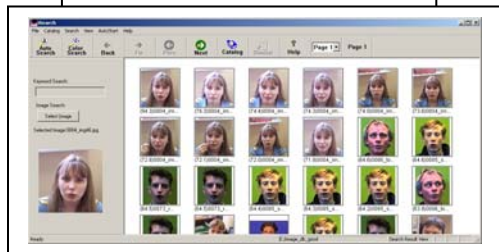

Visual Search

Searching Images, Videos, Faces, Products and Logos

Face Search

Face Search is a powerful face detection, search and recognition solution. It detects people's faces in images and videos, identifies similar faces, searches and compares the detected faces with an existing data set and finds exact and similar matches.

Face Search has wide ranging applications across a broad spectrum of industries such as Entertainment, Security and Surveillance and Retail.

Logo / Design Search

Trademark and Logo Search is a web application that enables users to search of logo and trademark images in seconds. The application searches through a large database of trademarks registered with the US Patent and Trademark Office (USPTO) and displays search results featuring images that are the closest matches to the user's query image.

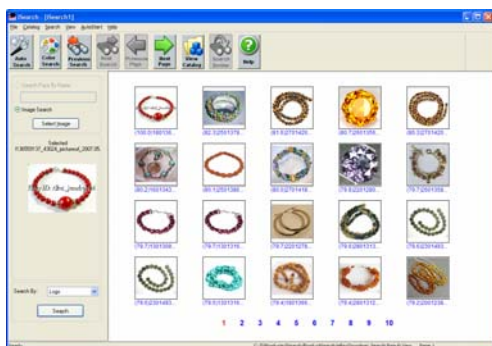

Users can also perform hybrid searches by combining the power of visual search with text and keyword searches
